EXPERIENCE

USDKit

Sept. 2024 – May 2025

Software Engineer Intern

Remote

- Codebase consisted of C, C++, Objective-C, Metal/Vulkan and Pixar's USD 3D file format.
- **Developed text rendering system** using multiple advanced algorithms, improving visual quality and performance across different hardware configurations.
- **Researched font legibility** improvements for enhancing user readability across different screen sizes and DPI.
- **Built multiple advanced animation systems** (Caches, Transforms, Skeletal Animations), with variable FPS and refresh rate. Validated results against industry tools like Blender and Maya. **All in < 1ms.**
- **Debugged complex graphics issues** using professional development tools such as XCode/RenderDoc, GDB/LLDB and custom visualization tools, reducing bug resolution time by 40%.

RealityBob

June 2023 – Feb. 2024

Software Engineer Intern

Remote

- Worked with C++, JS, WebAssembly and WebGPU.
- **Led porting process of native graphics application to web platform**, enabling browser-based 3D graphics.
- **Bridged native and web technologies** by writing custom integration code between **multi-threaded C++** graphics engine and modern web standards, solving compatibility challenges.
- **Documented porting process** and usage of various techniques encountered along.
- **Worked independently with minimal supervision** along the porting process.
- **Evaluated long-term feasibility of web-based 3D graphics** for business applications through research and prototyping, informing strategic product decisions.

PROJECTS

UndefinedLanguage

[website/articles/undefinedlanguage](#)

- **Designed and implemented a four-stage compiler** from Tokenizer to Codegen, entirely from scratch.
- **Built a recursive descent parser** with symbol table management, AST generation, and type checking.
- **Developed a static type system** supporting functions, control flow, and primitive types, with a foreign function interface (FFI) to JavaScript.
- Custom WASM bytecode generation **eliminated LLVM's heavy machinery completely.**
- Improved tree traversal performance with **optimized tree data-structure by 1.7x.**

EDUCATION

Indian Institute Of Information Technology (IIIT), Sri City

AP, India

Bachelor of Technology (B.Tech)

Aug. 2021 – Aug. 2025

EXTRACURRICULAR ACTIVITIES

Club Enigma

Aug. 2023 – Jul. 2024

Computer Graphics Lead

IIIT-S

- **Taught computer graphics fundamentals to 7+ junior students**, covering rendering concepts and practical implementation techniques.
- **Mentored student projects across multiple domains**, providing technical guidance and hands-on collaboration to help them deliver working prototypes.
- **Conducted various sessions**, industry guest talks and major events like **Global Game Jam** under the club.

CLASSES

Courses: Computer Architecture (CA), Computer Graphics & Multimedia (CGM), Virtual/Augmented Reality (VAR), Compiler Design (CD), High Performance Computing (HPC).

SKILLS & INTERESTS

Programming: C, C++, Objective-C, Zig, Python, JavaScript, C#

Technologies: Metal, OpenGL, WebGPU, GLSL, AArch64, LLDB/GDB, XCode, RenderDoc, Instruments, MacOS, UNIX, WASM, Git, Github, Linux, CMake
